DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on September 9, 2009 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 6 to 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 5,650,024 ("Hasegawa") in view of US Patent 5,415,706 ("Scarlin") or US Patent 4,477,280 ("Shiga") for the reasons stated in the previous office action dated March 9, 2009.

Response to Arguments

4. Applicant's arguments filed September 9, 2009 have been fully considered but they are not persuasive.

5. Applicant argued that Hasegawa discloses a steel composition containing at least one element selected from the group consisting of Ti, Zr, Ta and Hf in an amount 0.005 to 2.0% which would be excluded by the recitation "consists of" in the claims.

6. It is the Examiner's position that it would be obvious for one skilled in the art to omit Ti, Zr, Ta and/or Hf and its known function (increase creep strength) when its known function is not needed or desired. According to Hasegawa on lines 14 to 40 in column 3, Ti, Zr, Ta and/or Hf are added to form fine carbides and carbonitrides which improve creep rupture strength at the HAZ weld. Similarly, Applicants in first full paragraph on page 9 and original claims of instant specification discloses adding these elements for the same purpose as Hasegawa which is to form fine carbontirides in steel to contribute to creep strength. Consequently, for Applicant to eliminate Ti, Zr, Ta and/or Hf from its present invention where the function attributed to such element is not desired or required, such as in compositions for providing lower creep rupture strength in environments which do not encounter high level of creep corrosion, would be an obvious expedient productive of no new and unexpected results.

7. For the foregoing reason, claims would not patentably distinguish over prior art.
